Take on Market: Buy Corrections, stay put on Longs

- ❖ Earnings season is concluding on a high note. Aggregate of 420 companies has reported net profit growth of 31.56% for FY24 on YoY basis while the same basket for Q4FY24 delivered 26.60% net profit growth over same quarter last year. Barring IT basket where majors have reported scratchy Q4FY24 earnings update with uncertainty looming as to the business pick up in BFSI, North America and discretionary spends. Financials stole the show delivering 43%PAT growth in Q4FY24 (Y/Y).
- ❖ India in near term is likely to witness bouts of volatility with profit taking pressure at higher levels, as market prepare for general elections outcome on 4th of June. Internals of earnings update by corporates for Q4FY24 and for the year FY24 was robust. Take away being, volume growth will be key driver for forward earnings while best of operating margins are behind.

India's relative outperformance trajectory likely to continue. India Strategy is to: 'Buy corrections while staying put on longs.'

Trading Guideline

- ✦ This model is based on the premise that the PIVOT is the most important price level that decides this intraday trend. Much like how the door or a window hangs by a hinge and sways in the wind, the intraday This trend also hangs by this PIVOT LEVEL and swings because of the Demand & supply, volatility and market sentiments prevailing in the market. Hence its importance in intraday trading
- ✦ Wait for the market price to stabilize after opening the first 30 minutes of trading
- ✦ Opening Price is considered around the close of the Previous day.
- ✦ Avoid BUYING if prices open abnormally high and avoid selling if prices open too low
- ✦ If the market price is stable above the pivot level after 20-30 minutes of opening, then GO LONG and book profit near the resistant level (R1 & R2)
- ✦ If the market price is stable below the pivot level after 20-30 minutes of opening, then GO SHORT and book profit near the support level (S1 & S2)

S1, S2 are the immediate support levels. R1, R2 are the immediate resistance levels.

Stop Loss

- Since you are aware of the 'potential returns at the time of initiating an intraday trade (difference between the entry price and profit targets), you should set up an appropriate STOP LOSS around 1% above / below of the trade price or a level comfortable to you, to protect yourself if the market turns and goes against you.

Alternate Strategy

- If you have already initiated a trade with clear-cut profit targets and a stop loss level, and find during the course of the trading day that the market turns and goes the other way and crosses the TREND LEVEL, then trade again: For instance, if your first trade was a LONG trade and the market price drops through the TREND LEVEL to lower price levels, then GO SHORT and if your first trade was a SHORT trade and the market price rises through the TREND LEVEL to higher price levels, then GO LONG.
